

Upaya Client API

GET Delivery Locations

https://portal-api.upaya.com.np/api/v1/client/locations

Get Client Locations

This endpoint makes an HTTP GET request to retrieve a list of client locations.

Response

The response of this request is a JSON object representing the client locations. You can use the following JSON schema to understand the structure of the response:

```
json

{
  "type": "object",
  "properties": {
    "locationId": {
      "type": "string"
    },
    "locationName": {
      "type": "string"
    },
    "address": {
      "type": "string"
    }
  }
}
```

AUTHORIZATION API Key

Key	X-API-Key
Value	*****

GET Single Delivery Location

https://portal-api.upaya.com.np/api/v1/client/locations/:locationid

This endpoint retrieves the details of a specific client location identified by the ID "603". The response of this request is documented below as a JSON schema.

json

```
{
  "type": "object",
  "properties": {
    "locationId": {
      "type": "string"
    },
    "locationName": {
      "type": "string"
    },
    "address": {
```

GET Track Order

https://portal-api.upaya.com.np/api/v1/client/track-order/:orderid

Track Order Details

This endpoint retrieves the details of a specific order by providing the order ID in the request URL.

Response

The response of this request is a JSON object with the following schema:

json

```
{
  "orderNumber": "string",
  "status": "string",
  "estimatedDeliveryDate": "string",
  "items": [
    {
      "name": "string",
      "quantity": "number",
      "price": "number"
    }
  ],
```

AUTHORIZATION API Key

Key	X-API-Key
Value	*****

PATH VARIABLES

orderid	WRL2408001AZSN

POST Order Rates

https://portal-api.upaya.com.np/api/v1/client/order-rates

The `POST /api/v1/client/order-rates` endpoint is used to calculate the rates for placing an order. The request should include the initial weight, order type, service type ID, location ID, length, breadth, and height.

Request Body

- `initial_weight` (number): The initial weight of the order.
- `order_type` (string): The type of the order.
- `service_type_id` (number): The ID of the service type.
- `location_id` (number): The ID of the location.
- `length` (number, optional): The length of the order.
- `breadth` (number, optional): The breadth of the order.
- `height` (number, optional): The height of the order.

Response

The response of this request will be documented as a JSON schema.

Body raw (json)

json

```
{
  "initial weight":10,
```

```
"order_type": "delivery_order",
"service_type_id": 1,
"location_id": 606,

"length": null,
"breadth": null,
"height": null
}
```

POST Add New Order

<https://portal-api.upaya.com.np/api/v1/client/add-order>

Add Order

The `Add Order` endpoint is a POST request that allows clients to add a new order.

Request Body

- The request body should be in JSON format with the following parameters:

- `customers` (array)
 - `receiver_name` (string)
 - `receiver_contact` (string)
 - `receiver_alternate_number` (string)
 - `area_id` (integer)
 - `product_price` (integer)
 - `cod_amount` (integer)
 - `remarks` (string)
 - `receiver_address` (string)
 - `receiver_landmark` (string)
 - `order_reference_id` (string)
 - `initial_weight` (integer)
 - `service_type_id` (integer)
 - `product_description` (string)
 - `length` (integer)
 - `breadth` (integer)
 - `height` (integer)
 - `product_category_id` (integer)
 - `order_type` (string)
 - `client_note` (string)

Response

The response of this request is a JSON schema representing the structure of the response object.
